## TCI CELEBRATES 40 YEARS OF MANUFACTURING IN NEW HAMPSHIRE

LONDONDERRY, NH, Dec. 2, 2025 – TCI, a leading manufacturer of high-performance films, laminates, and composites, is proud to be celebrating 40 years of innovation and manufacturing in the Granite State.

For decades, TCI has been making high-performance materials that resist extreme temperatures and harsh chemicals, and at the same time are durable and anti-static. Because of these properties, TCI's products solve challenges in critical sectors, including aerospace, energy, life sciences, and communications.

TCI was founded in 1985 and continues to this day as a family-owned business that thrives on innovation. For instance, TCI's TEXCOAT™ material was developed in the company's early days to make expansion joints that enable the efficient and environmentally safe transfer of gases at power plants, and today, TCI is the leading supplier of non-metallic, fabric expansion joints to power plants around the world. TCI steadily grew its industrial materials business, and then doubled down on innovation over the past 15 years.

"We've never been complacent when it comes to R&D. We are committed to solving problems that our customers face and are willing to put the talent and capital toward figuring them out, and making exceptional products that solve those problems", said John Tippet, CEO of TCI.

Today, TCI's materials are used in virtually every industrial sector and hundreds of applications – including in pharmaceutical, medical, and life sciences equipment, semi-conductor applications, radome coverings for advanced communications systems, geomembranes for chemical storage tanks and landfills, architectural coverings for a professional sports complex, commercial cooking equipment, and countless other applications. TCI's innovation trajectory continues to rise.

"The future for product development at TCI is bright, thanks to the talent and heart of our employees", added Tippet. TCI employs more than 200 employees in New Hampshire, and many of those employees have been with the company for 20-30 years. "We do not take for granted that our employees grow with this company and quite often make it their career to help deliver outstanding products to our customers", said Patrick Smith, HR Director at TCI. "In return, we've committed to making our employees and our work culture a central part of our mission".

On its 40th anniversary, TCI recognizes its employees, customers, and its community, and looks forward to taking its innovation spirit into the coming decades.

### About TCI

Textiles Coated, Inc. (TCI) has been a leading manufacturer of high-performance fluoropolymer films, laminates, and composites since 1985. TCI's products are designed to work in the most demanding environments and are especially suited for harsh chemical and thermal conditions. TCI's facilities have over 180,000 ft<sup>2</sup> of manufacturing space with customized coating, lamination, fabrication, film, mixing, maintenance, research and development, and laboratory departments. TCI provides high quality products, with short lead times and excellent customer support, due to its employees and an around-the-clock manufacturing schedule.
